43/50

JKUAT CONTINOUS ASSESSEMENT TESTS

NAME: Berachah Awuor Gombe.

REG NO: TDC 113-C002-0002/25

COURSE: COMPUTER SCIENCE YEAR OF STUDY: Yr 1

SHEET NO:

UNIT CODE: TITLE: Computer Organization

DATE: 23/10/2025

NOTE: This stationery will be used for continuous assessment work only.

It will be a breach of examination regulations to use it otherwise.

Section A.

a Memory organization:

- It will enable the system to multitask
It will reduce data access time
It will optimize resource utilization
It will improve system performance.
The stability of the system would be enabled.

(3)

05

b.

It is volatile
It has a higher capacity
It has an access time

(3)

03

08

C. i- 1.73 GHz to 2.56 GHz - Processor / CPU upgrade.

ii. 256 MB to 512 MB - Memory Upgrade.

03 iii - 40 GB to 120 GB - Storage upgrade.

Section B

1 Factors to consider for a graphics designer.

- High resolution monitor - This is to enable Sarah to do her work and to visibly see what she is doing with utmost clarity.
- A powerful graphics card - With the help of a graphics card Sarah can be able to run very powerful applications with ease.
- Higher RAM. - Sarah would be able to multitask with the help of a RAM of about 16-32 GB ossity.
- A monitor with a higher refresh rate - With a computer with a refresh rate that is high Sarah could use her monitor with less interruptions / logging.

13

- Precision mouse and keyboard - This being the basic I/O devices, Sarah would need them to interact with her computer and system.

11.

HDD are fairly very slow in data transfer while the SSD are relatively fast as compared.

HDD are a little bit large as compared to the SSD that is fairly small.

Mostly HDD are found in Desktops while SSD are found in smaller computers / portable computers.

06 HDD can be used as an external storage device while SSD can only be used inside a computer.

HDD are larger in storage size reaching upto 2TB of storage while SSD only reaches 512 GB proving that is smaller as compared to HDD.

HDD can store files / data for a longer duration while SSD can only store files for a duration of time.

2. Interrupt I/O.

- ~~When the I/O device is ready~~
- I/O is ready - When the I/O device has been inserted in the computer and it is ready to send and receive data.

04 Sends a signal to CPU - The I/O device will now send an interrupt signal to the CPU that it is ready to receive and send data.

10
